

MEMBER OF

WELLWAIJ PULLEY COVERING MATERIAL

When a belt slips on the pulley, it shortens the life of the belt considerably. But your drum motors and bearings are heavily taxed too. And as a result: they will wear out faster. The solution is as simple as effective: cover your pulley(s) with the professional anti-slip covering material of Wellwaj Belting.

Wellwaj pulley covering material improves the grip of the driving pulley on the belt material. This leads to less chance of slip, while the belt tension can be reduced. The result: less wear on your belt, pulley and bearings and a significantly longer service life of these components. In addition, pulley covering material leads to smoother running of the belt and the higher friction has a positive effect on the belt control.

Our product range

Depending on the application and your requirements, we can apply different types of covering materials, such as:

- **PVC anti-slip coating**
Available in various colours, thicknesses and profile types. Also available as self-adhesive tape.
- **PU anti-slip coating**
Available in various colours, hardnesses and profile types.
- **Rubber anti-slip coating**
Available in 6 and 8mm thick diamond profile in various hardnesses.
- **Hot vulcanized materials**

For both non-food as food applications
We supply drum covering material for both non-food as food (FDA/EU accepted) applications.

Please feel free to contact us for more information.

ADVANTAGES

- + Extends the life of belts, drums and bearings
- + Available in PU, PVC and rubber
- + Available in different colours and profile types
- + For both non-food and food (FDA/EU accepted) applications
- + Also available incl. Alutrom
