## WELLWAIJ COVERING MATERIAL FOR TIMING BELTS & CONVEYOR BELT PROFILES

Using timing belts and conveyor belt profiles becomes more and more popular, especially when an exact positioning of the product is required. For the best result, the surface of these parts must be suitable for the application. To achieve this, allow us to lag these components with Wellwaj covering material.

By covering your timing belts and conveyor belt profiles with professional covering material, the perfect grip on the product to be transported is realized. Thus, the product still remains better in its position. In addition, the covering material protects the product, timing belt and/or profile against wear.

### Experienced advice

On the basis of the application and desired coefficient of friction and hardness, we will be pleased to advise the most suitable solution.

**Please feel free to contact us for more information.**

### Our product range

Wellwaj covering material is available in PU, PVC, foam and rubber in various colours. Depending on the application a smooth, soft or profiled topside can be selected.

We can supply the covering material in any width and in hardnesses ranging from 20° to 92° Shore A (PVC/PU).

### International FDA/EU standards

For applications in the food industry we have developed oil- and grease resistant types in various colours such as blue and white. The quality of these products fully comply with the international guidelines of the EU and FDA.

## ADVANTAGES

- + Excellent quality
- + For perfect grip on the product
- + Protects the product, timing belt and/or conveyor belt profile against wear
- + Also available in oil- and grease resistant types
- + Tailor made solutions
- + Short delivery times
