WELLWAIJ CONE BELT PERFECT FOR POTATOES

Do you require a conveyor belt for your separator of clods which is wear-resistant and conveys effectively stones, clods and foliage without damaging the vulnerable potatoes or bulbous plants? Choose the cone belt of Wellwaj Belting.

The Wellwaj cone belt has a rubber cone profile which is both rigid, wear-resistant and product friendly. At the separator roller the profile absorbs the pressure of the hard clods and stones while the potatoes are smoothly conveyed to a case or to the next conveyor belt. This vastly reduces the risk of product damage. Foliage and dirt are kept behind in the profile and automatically fall from the belt at the turning point.

Also suitable for clod separators

Wellwaj cone belts are often fitted in combination with Wellwaj hedgehog belts in professional clod separators.

Characteristics of the profile

The cones are 30 mm high and have a center distance of 20 mm square. The cones are placed in line which makes it easy to remove any dirt with a comb or brush.

Available in the colors blue and black. Especially for the transport of foodstuffs we have developed the blue cone belt. This belt fully complies with the guidelines of the US authorities (FDA).

The cone belt consists of a rubber mat fitted on a plastic conveyor belt. This design offers various advantages:

- The belt is relatively low in weight
- Can be fitted in equipment with smaller diameters
- The belt can be equipped with accessories, such as guiding ropes, spill edges etc.
